Professional Summary

Full-Stack Developer with 1+ year of experience delivering production features on a multi-tenant enterprise SaaS platform using **Java 17, Spring Boot 3, React 18, and PostgreSQL**. Owns features end-to-end across the SDLC — database schema design, RESTful API development, OAuth 2.0 / JWT authentication, and responsive React UIs. Delivered secure multi-tenant third-party integrations and a design system adopted across 50+ components, working in an Agile/Scrum team through sprint planning, code reviews, and production releases.

Technical Skills

- **Languages:** Java 17, JavaScript (ES6+), SQL, HTML5, CSS3
- **Frontend:** React 18, Redux, React Router, Tailwind CSS, Recharts, Axios, Responsive Design, Design Systems
- **Backend:** Spring Boot 3, Spring Security, Spring Data JPA / Hibernate, RESTful API Design, OAuth 2.0, JWT, Node.js, Express.js, OOP
- **Databases:** PostgreSQL, Supabase, MySQL, JSONB, GIN Indexing, Flyway Migrations, Schema Design
- **Tools & Practices:** Git, GitHub, Maven, Postman, VS Code, Figma (Basics), Agile / Scrum, Code Review, SDLC, Clean Code
- **Languages Spoken:** English, Kannada, Telugu

Professional Experience

ProBits Technology Pvt Ltd Bengaluru, India

Associate Software Developer *June 2025 – Present*

- Full-stack development on Savoira, a multi-tenant SaaS platform, across PostgreSQL schema design, Spring Boot REST APIs, and React/Redux UIs — owning features end-to-end from requirements through production release.
- Redesigned the Trainer, Vendor, and Client management modules onto a shared design system, migrating legacy markup with zero regressions to existing API contracts and validation; built reusable cascading Country/State/City address components shared across all three forms.
- Collaborated in an Agile/Scrum team through sprint planning, code reviews, and pair programming; managed delivery via Git feature branches and pull requests.

Savoira — Multi-Tenant SaaS Platform *Dec 2025 – Present*

React 18, Redux, Tailwind CSS, Spring Boot 3, Java, JPA/Hibernate, PostgreSQL, OAuth 2.0, JWT, Recharts, Flyway

- Multi-tenant SaaS platform for training organizations managing trainers, vendors, clients, work engagements, scheduling, document workflows, and delivery analytics.
- **Reports & Analytics (Full-Stack):** built 17 REST endpoints and 8 report sections with 7 Recharts visualizations powering 2 multi-tenant analytics dashboards, including drill-down navigation from summary KPIs to row-level records without page reload.
- **OAuth 2.0 & Third-Party Integration:** integrated 3 OAuth providers (Google, Microsoft, Meta WhatsApp Business) with per-tenant configuration, signed state parameters for CSRF protection, and encrypted token storage at rest — enabling tenant-owned email delivery instead of a shared SMTP account.
- **Public Sharing & Data Security (Full-Stack):** designed a token-based public sharing flow with field-level disclosure control, exposing an unauthenticated REST endpoint that returns only explicitly whitelisted fields to prevent PII exposure.
- **Global CSS & Design System:** architected the app-wide CSS — 19 stylesheets, 144 design tokens, 8 reusable UI primitives — adopted across 50+ components, with CSS custom-property theming for light/dark and brand modes.
- **Document & Task Workflows:** built versioned document upload with mandatory change-reason capture, uploader attribution, and full revision history, plus a task management module (assignment, status transitions, due-date tracking) with a complete audit trail on every stage change.

- **Requirement Matching & Automation:** implemented a text-matching module mapping free-text requirement descriptions to trainer competencies, covered by unit tests, plus a trainer CV template renderer and profile-strength scoring that surfaces incomplete trainer records.
- **Database Design:** modeled PostgreSQL tables using JSONB with GIN indexing, managed schema evolution through Flyway migrations, and authored a reusable `DateRangeResolver` shared by all report filters.

Timesheet Management Application *June 2025 – Nov 2025*

React, Redux, Node.js, Express.js, PostgreSQL

- Built a full-stack application to track employee work hours and project tasks, with a responsive React frontend and Redux state management.
- Developed RESTful APIs in Node.js and Express for timesheet submission, approval, and reporting, backed by a PostgreSQL schema covering users, projects, and timesheet records.
- Implemented role-based access control separating employee and manager permissions.

Education

Rajarajeswari College of Engineering Bengaluru, India
B.E. in Electronics & Communication; CGPA: 8.15 *2021 – 2025*

Vidyavahini PU College Bengaluru, India
PUC — PCMB; 84% *2018 – 2020*

Manjushree English School Bengaluru, India
Class X, Karnataka State Board; 83% *2018*

Certifications

Full Stack Development — KodNest *July 2025*

Claude 101 — Anthropic *March 2026*
